**BISPHOSPHONATES**

Bisphosphonates are a class of medication that is used in the medical management of several disease states characterized by bone loss or fragility. Most commonly, they are used in the treatment of osteoporosis, multiple myeloma and metastatic carcinoma.

A list of Bisphosphonates include, but are not limited to:

Fosamax  
Actonel  
Aredia  
Zometa  
Boniva

Yes, I am currently taking or have previously taken a form of Bisphosphonate.

No, I have never taken a form of Bisphosphonates.
